

Dr. Chau-Chyun Chen is a professor at the Department of Chemical Engineering and the Jack Maddox Distinguished Chair in Sustainable Energy at the Edward E. Whitacre Jr. College of Engineering, Texas Tech University. A co-founder of Aspen Technology, Inc., Dr. Chen is known for developing the electrolyte NRTL activity coefficient model for electrolyte thermodynamics. He is the inventor of the industry-leading process simulation software for electrolyte systems, polymerization processes, small molecule drug solubility, CO₂ capture, and molecular characterization for petroleum assays. At Texas Tech, his research covers oil and gas production, e-waste and nuclear waste treatment, energetic materials, desalination, CO₂ capture and sequestration, and energy storage. He holds over 100 peer-reviewed scientific publications and book chapters, and 17 US and international patents.

Dr. Chen received BS degree in chemistry from National Taiwan University and MS and ScD degrees in chemical engineering from the Massachusetts Institute of Technology. He is a fellow of AIChE and was elected to the US National Academy of Engineering in 2005.
